Instructions for lectures 3/8, 3/10

As I mentioned in class, this week we will NOT have in-person lectures.
Here are the instructions of what you have to do on 3/8 and 3/10:

1) Watch the video "mySQL_Install_guide". It has instructions on how to install MySQL server and MySQL workbench (if you haven't done so yet). Having MySQL installed will also help you practice SQL queries for the class, as well as implement the database of your project.
2) Watch the video "Environment Setup for the Project". The powerpoint used for the video is under Files > Project Files > ProjectSETUPS22.pptx

IMPORTANT: EVERYONE WILL HAVE TO USE JAVA(JSP)/JDBC/HTML/MYSQL FOR THE PROJECT. **OTHER PLATFORMS ARE NOT ALLOWED** SINCE THE DIFFICULTY OF THE PROJECT VARIES WITH THE PLATFORM USED AND THE GRADES ASSIGNED WOULD NOT BE FAIR.

Under Files > Project Files you will find the resources needed to start developing your web app.

- A powerpoint (ProjectSETUPS22.pptx)with a lot of information about general web application development information.
- A sample application (cs336Sample.war) that you have to download and install according to the instructions of the video.
- A sample database schema (BarBeerDrinker schema) for running the template with data from the schema.
- A session.html file that describes how you can use the session objects for the project (described in the video as well).

If you encounter any problems or you have any questions with the installation, please send them on Piazza, so that other students can see them (in case they have similar issues).
